

a.) AMENDMENTS TO THE CLAIMS

Claims 1-8 (Cancelled)

9. (Currently Amended) A toy comprising:

a toy body with a magnetic display device, said magnetic display
comprising: an upper transparent flat-sheet member ~~having luster selected from iridescent~~
~~luster, iridescence and hologram appearance, said upper flat-sheet member being formed of~~
a non-magnetic material, ~~and~~ a lower flat-sheet member formed of a non-magnetic material
arranged parallel to said upper transparent flat-sheet member, ~~with~~ and an admixture of a
dispersion medium, ~~white~~ background pigments and ~~black colored~~ magnetic particles
~~admixed disposed~~ between the flat-sheet members, said upper transparent flat-sheet marker
having luster selected from the group consisting of iridescent luster, iridescence and
hologram appearance; ~~thereby an image being caused to appear or disappear upon~~
~~movement of the black magnetic particles present between the flat-sheet members,~~
~~said image being visible through the upper transparent flat-sheet~~
~~member;~~

~~whereby when said image disappears said black magnetic particles~~
~~settle downward away from upper transparent white pigments exhibit a white display, and~~
~~when said image appears said black magnetic particles migrate upward towards said upper~~
~~transparent flat-sheet member, said image being formed by a metallic luster color exhibited~~
~~by mixture of appearance of said migrated black magnetic particles with said luster~~

said toy further comprising a magnetic pen or magnetic stamp
whereby, when said magnetic pen or magnetic stamp is sufficiently
close to the upper transparent flat-sheet member, said colored magnetic particles migrate
towards said upper transparent flat-sheet member to form an image visible through said
upper transparent flat-sheet member, and
said colored magnetic particles settle away from said upper
transparent flat-sheet member in the absence of said magnetic pen or magnetic stamp,
whereby said background pigments exhibit a display.

10. (Currently Amended) A toy comprising:

a toy body with a magnetic display device, said magnetic display
comprising: an upper transparent flat-sheet member having luster selected from iridescent
and hologram appearance, said flat-sheet member being formed of a non-magnetic
material, and a plurality of microcapsules encapsulating an admixture of a dispersion
medium, background pigments and black colored magnetic particles fixed to the under
surface of the transparent flat-sheet member, said upper transparent flat-sheet member
having luster selected from the group consisting of iridescent luster, iridescence and
hologram appearance;~~thereby an image being caused to appear or disappear upon~~
~~movement of the black magnetic particles present in the microcapsules, said image being~~
~~visible through the transparent flat-sheet member,~~

~~whereby when said image disappears said black magnetic particles~~
~~settle downward away from said under surface of the transparent flat-sheet member and~~

~~said white pigments exhibit a white display, and when said image appears said black magnetic particles migrate upward toward said under surface of the transparent flat-sheet member, said image being formed by a metallic luster color exhibited by mixture of appearance of said migrated black magnetic particles with said luster~~

said toy further comprising a magnetic pen or magnetic stamp

whereby, when said magnetic pen or magnetic stamp is sufficiently close to the transparent upper flat-sheet member, said colored magnetic particles in said microcapsules migrate towards said upper transparent flat-sheet member to form an image visible through said upper transparent flat-sheet member, and

said colored magnetic particles settle away from the upper transparent flat-sheet member in the absence of said magnetic pen or magnetic stamp, whereby said background pigments exhibit a display.

11. (Currently Amended) The ~~magnetic display device~~ toy according to claim 10, further comprising a lower flat-sheet member formed of a non-magnetic material arranged parallel to said upper transparent flat-sheet member, said microcapsules being fixed between said upper flat-sheet member and said lower flat-sheet member.

12. (Currently Amended) A ~~magnetic display device~~ toy according to claim 9, said upper transparent flat-sheet member including a transparent non-magnetic layer and an separate luster layer, ~~said upper transparent member including a transparent non-magnetic layer and iridescence and hologram appearance.~~

13. (Currently Amended) The ~~magnetic display device~~ toy according to claim 10, said upper transparent flat-sheet member comprising a transparent non-magnetic layer and a separate luster layer ~~having luster selected from iridescent luster, iridescence and hologram appearance.~~

14. (Currently Amended) The ~~magnetic display device~~ toy according to claim 11, said upper transparent flat-sheet member comprising a transparent non-magnetic layer and a separate luster layer ~~having luster selected from iridescent luster, iridescence and hologram appearance.~~
